Task - 1(Prediction using Supervised Machine Learning)

Simple Linear Regression

In this regression task we try to predict the percentage of marks that a student is expected to score based upon the number of hours they studied. This is a simple linear regression task as it involves just two variables.

Technical Stack : Scikit-learn, Numpy, Pandas, Matplotlib

```
In [1]: # Importing the required libraries
from sklearn.model_selection import train_test_split
from sklearn.linear_model import LinearRegression
import matplotlib.pyplot as plt
import pandas as pd
import numpy as np
```

Step-1 : Reading Data from source

```
In [2]: # Reading data from remote link
url = "https://raw.githubusercontent.com/AdiPersonalWorks/Random/master/student_scores%20-%20student_scores.csv"
s_data = pd.read_csv(url)
print("Data import successful")

s_data.head(10)
```

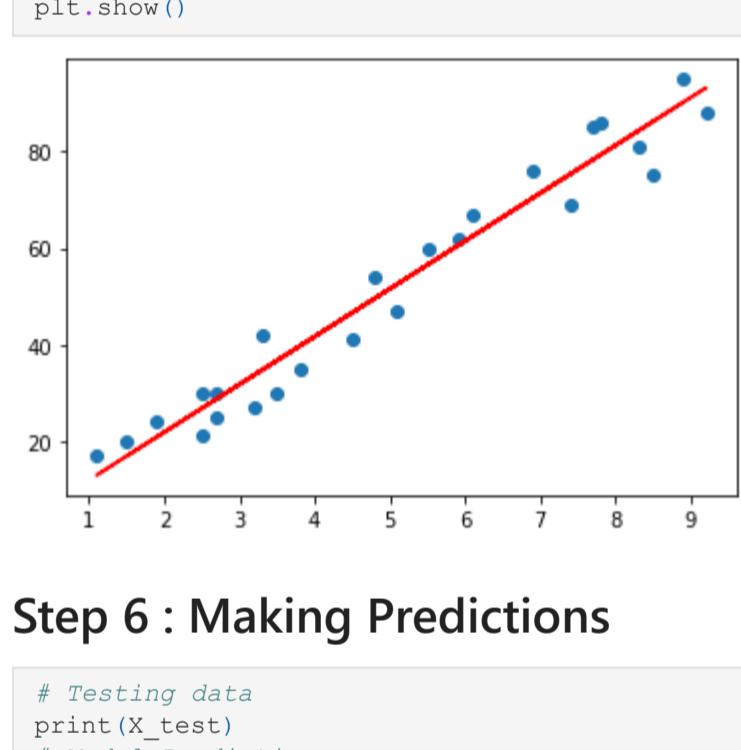

Data import successful

```
Out[2]:
```

	Hours	Scores
0	2.5	21
1	5.1	47
2	3.2	27
3	8.5	75
4	3.5	30
5	1.5	20
6	9.2	88
7	5.5	60
8	8.3	81
9	2.7	25

Step 2 : Input data visualization

```
In [3]: # Plotting the distribution of scores
s_data.plot(x='Hours', y='Scores', style='o')
plt.title('Hours vs Percentage')
plt.xlabel('Hours Studied')
plt.ylabel('Percentage Score')
plt.show()
```

Step 3 : Data Preprocessing

```
In [4]: X = s_data.iloc[:, :-1].values
y = s_data.iloc[:, 1].values
```

Step 4 : Model Training

```
In [5]: X_train, X_test, y_train, y_test = train_test_split(X, y, test_size=0.2, random_state=0)
regressor = LinearRegression()
regressor.fit(X_train.reshape(-1,1), y_train)

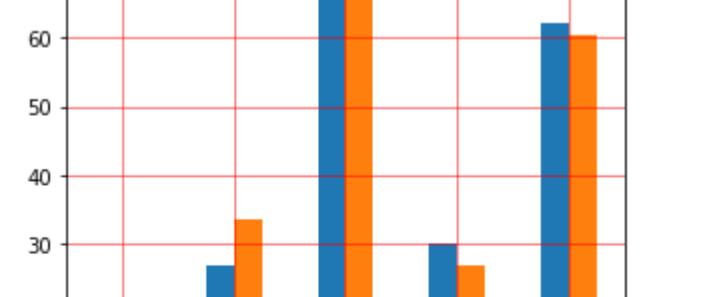

print("Training complete.")
```

Training complete.

Step 5 : Plotting the line of regression

```
In [6]: # Plotting the regression line
line = regressor.coef_*X+regressor.intercept_

# Plotting for the test data
plt.scatter(X, y)
plt.plot(X, line,color='red');
plt.show()
```

Step 6 : Making Predictions

```
In [7]: # Testing data
print(X_test)
# Model Prediction
y_pred = regressor.predict(X_test)

[[1.5]
 [3.2]
 [7.4]
 [2.5]
 [5.9]]
```

Step 7 : Comparing actual result to the predicted model result

```
In [8]: # Comparing Actual vs Predicted
df = pd.DataFrame({'Actual': y_test, 'Predicted': y_pred})
```

```
Out[8]:
```

	Actual	Predicted
0	20	16.884145
1	27	33.732261
2	69	75.357018
3	30	26.794801
4	62	60.491033
